

António Pereira

OutSystems Architect & Champion

I help engineering teams design, deliver, and scale OutSystems solutions that move the business — not just ship the build.

★ **OutSystems Champion** Since 2022 · 50+ Forge assets · Awarded by OutSystems for sustained technical excellence and community contribution

PROFILE

I'm a senior software engineer and architect with a decade of building scalable web and mobile applications — most of that time spent close to the OutSystems platform, from inside R&D to leading delivery teams for enterprise clients.

I've shipped product features at OutSystems itself, set the technical direction for delivery teams as a Delivery Manager, and now design and audit enterprise architectures at Babel. The thread through all of it: turning ambiguous business problems into systems that are robust, fast to evolve, and a pleasure to maintain.

EXPERIENCE

Architect · Frontend · Babel · IRN — Instituto dos Registos e do Notariado Feb 2026 — May 2026

PUBLIC SECTOR · GOVERNMENT REGISTRIES — Portuguese government institute responsible for civil, commercial, and property registry services — the system of record for births, deaths, marriages, companies, and real estate nationwide.

Frontend support modules for registry systems

Defined frontend architecture for the IRN registry support modules; piloted and rolled out Claude AI as a development accelerator across the frontend team.

- Defined frontend architecture, component patterns, navigation structure and UI guidelines for IRN's registry support modules; mentored the frontend team on architectural alignment and usability requirements.
- Piloted and rolled out Claude AI as a frontend development accelerator — concrete use cases (code generation, component prototyping, code review, unit-test creation, technical docs) and AI-assisted workflows with prompting best practices and output-validation gates.
- Drove team adoption of Claude AI through training sessions, knowledge sharing, and a reusable prompt library tailored to the IRN context.
- Ensured integration with IRN's existing civil registry backend services and APIs; enforced compliance with security, RGPD, and Portuguese public-sector standards.
- Monitored productivity and quality metrics before/after AI introduction, iterating to maximize AI's impact on the development cycle.

TECH TypeScript · React · REST API · .NET

Mobiliários

PUBLIC SECTOR · FINANCIAL REGULATION — Portuguese securities and capital markets regulator — supervises listed companies, investment funds, and financial intermediaries operating in Portugal.

Low-code digital channels (additional scope)

Architected OutSystems solutions for the Portuguese securities/capital-markets regulator, ensuring compliance with supervisory and reporting requirements over regulated entities.

- Defined OutSystems solution architecture for CMVM projects, ensuring compliance with regulatory requirements for capital markets and securities oversight.
- Designed application structure and data model supporting supervision, registration, reporting, and inspection processes over regulated entities.
- Ran technical audits — performance, scalability, security, technical debt — and produced recommendation reports for in-flight projects.
- Validated architecture and design decisions against OutSystems best practices (Architecture Canvas, 4-Layer Canvas) and CMVM's internal standards.
- Supported delivery teams on complex technical challenges — legacy-system integrations, large-data processing, regulatory business-rule implementation.

TECH OutSystems

OutSystems Architect · Practice & cross-engagement support · Babel

Jun 2024 — Now

Architectural leadership across Babel's OutSystems practice in parallel with named client engagements — cross-account audits, pre-sales architecture, mentoring, and contribution to firm-wide platform recognition.

- Helped position Babel as a Top OutSystems Partner Worldwide and the
- Provided architectural guidance and audits across multiple parallel client engagements, applying OutSystems best practices (Architecture Canvas, 4-Layer Canvas) consistently across the portfolio.
- Served as the technical voice for inbound OutSystems opportunities — pre-sales scoping, technical proposal defence, and POC delivery.
- Mentored delivery teams across business-critical accounts, partnering with engineers to unblock complex architectural challenges and raise the bar on performance and quality.
- Represented Babel's OutSystems practice in the community as an OutSystems Champion — sustained Forge contributions, partner-network engagement, and community presence.

Architect · LowCode · Babel · NOS Technology

Sep 2025 — Mar 2026

TELECOMMUNICATIONS — Technology arm of NOS — Portugal's leading cable, internet, fixed and mobile telecom operator (~5M customers, listed on Euronext Lisbon).

Plataforma Benefícios V2

Architected an OutSystems platform for NOS employee benefits — multi-benefit catalog, self-service portal, configurable eligibility rules, and integration with NOS core HR systems.

- Architected an OutSystems platform for employee benefits (health, education, well-being, mobility, insurance, partnerships, incentives) with eligibility rules configurable by role, seniority, level and contract type.
- Designed the employee self-service portal with submission, tracking, plafond visibility, history, and the submit/validate/approve workflow with auto-routing by benefit type and approval hierarchy.
- Led the integration strategy with NOS core systems (SAP HR, Active Directory) for employee, hierarchy, and organizational-structure sync.
- Designed HR management dashboards (adoption per benefit, plafond consumption, cost trends, satisfaction) and a role-based access model (employee, manager, HR, admin, auditor) with encryption of personal/financial data.
- Supervised delivery teams technically — architecture and code reviews, OutSystems best-practices enforcement (Architecture Canvas, 4-Layer Canvas), and a dynamic-config model for adding new benefits without code changes.

TECH OutSystems · REST API

Solution Architect · Team Leader · Babel · IRN — Instituto dos Registos e do Notariado

Oct 2024 — Jun 2025

PUBLIC SECTOR · GOVERNMENT REGISTRIES — Portuguese government institute responsible for civil, commercial, and property registry services — the system of record for births, deaths, marriages, companies, and real estate nationwide.

Serviços OutSystems — Lote 4

Solution Architect and Team Leader on a nationally-critical Portuguese government program — re-platforming IRN's request submission and processing onto .NET Core microservices with a React/Next.js frontend.

- Acted as Solution Architect and Team Leader for a nationally-critical Portuguese government project — unified platform for IRN request submission and processing, with full tech redesign and database remodeling.
- Led a multidisciplinary Scrum team of 10 inside a wider program of 70+ people across business and technology streams; served as the bridge between business and technology, aligning technical solutions with business needs.
- Drove the re-platform from OutSystems to .NET Core / microservices / containers with a Next.js / React / TypeScript frontend and ApiSix API Gateway for performance, security and scalability.
- Built the CI/CD foundation with Jenkins, ArgoCD, Sonatype Nexus Repository, and GitLab.
- Operated in a context of business and technical modernization, leading prioritization, stakeholder negotiation, and architecture decisions across the program.

Architect · KinetIT · Volkswagen Group (Germany)

Jan 2023 — Sep 2023

AUTOMOTIVE · OEM — One of the world's largest automotive groups — parent of Volkswagen, Audi, Porsche, SEAT, Škoda, Lamborghini, and Bentley, producing 9M+ vehicles per year.

ADMS — Wind Tunnel Test Management

Architected an OutSystems platform for managing and analyzing wind-tunnel aerodynamic tests across Volkswagen Group brands, including real-time telemetry ingestion from SCADA and data-logger systems.

- Designed an OutSystems-based solution for managing and analyzing wind-tunnel aerodynamic tests for Volkswagen Group brands — VW, Audi, Porsche, SEAT, Škoda, Lamborghini, Bentley.
- Architected the data model and application structure for multi-brand configurations (brand, model, component type) with telemetry processing at scale.
- Designed the test-configuration module with flexible parametrization of aerodynamic variables (wind speed, attack angle, temperature, pressure, drag and lift coefficients).
- Architected real-time data ingestion from wind-tunnel acquisition systems (sensors, data loggers, SCADA) and the analysis layer with interactive dashboards comparing results across versions and brands.
- Defined role-based access (test engineer, tunnel manager, data analyst, brand lead) and IP/sensitive-data protection across the group; supervised delivery teams and validated scalability for new tunnels, brands, and test types.

TECH OutSystems 11 · REST API

OutSystems Success Manager · KinetIT

Feb 2022 — Jul 2024

Led the OutSystems practice — trained developers, owned architectural reviews and estimations, and built KinetIT's OutSystems Knowledge Base.

- Helped drive the KinetIT OutSystems practice to a 5.0 average customer rating and the OutSystems Quality App badge.
- Led the OutSystems practice — trained and coached developers through certifications, kept the team current on platform releases, and grew the OutSystems skill base inside the org.
- Built the OutSystems Knowledge Base — a centralized repository of patterns, code samples, and docs that cut ramp-up time for new projects.
- Owned architectural reviews, estimations, and POCs across the practice; the technical voice for new opportunities.
- Delivered projects end-to-end against budget and timeline while keeping stakeholders aligned.

Tech Lead · KinetIT · Luz Saúde

Jan 2020 — Sep 2020

HEALTHCARE · PRIVATE HOSPITAL GROUP — Portugal's largest private healthcare group — operates ~15 hospitals and clinics nationwide and is part of the Fidelidade Group.

Cobrança de Faturas — Automated debt collection w/ Salesforce CRM

Tech-led an automated invoice-collection platform for the Luz Saúde healthcare group, with bidirectional Salesforce CRM integration, multi-channel communications, and risk-based debtor segmentation.

- Tech-led the OutSystems platform for automated identification and management of unpaid-invoice collection processes at Luz Saúde, the major Portuguese healthcare group.
- Designed the configurable rule engine (deadlines, late-stage tiers, contact strategies) and the staged auto-collection workflow (friendly reminder → formal notice → pre-litigation → litigation).
- Architected bidirectional Salesforce CRM integration — case/task creation, client and opportunity sync, REST-API consultation — giving commercial teams real-time collection-status visibility.
- Built multi-channel automated communications (email/SMS/letter with stage-and-segment templates), payment-agreement management, debtor segmentation by risk/amount/history, and dashboards (debt aging, recovery rate, contact-channel efficacy).
- Ensured RGPD compliance for personal/financial data, role-based access (collection manager, finance analyst, commercial, admin), audit trail for legal/compliance, and reporting for regulators.

TECH OutSystems · OutSystems Async Processing · REST API · Salesforce

Delivery Manager · KinetIT

Jun 2019 — Feb 2022

Managed OutSystems delivery teams as both technical lead and people manager; embedded with partner consultancies on critical engagements.

- Managed OutSystems delivery teams as both technical lead and people manager.
- Embedded with Do iT Lean for a single OutSystems delivery project during this period.

Tech Lead · OutSystems Consultant · Outfit (now Devoteam)

Mar 2018 — May 2019

OutSystems Tech Lead across consulting engagements — owned product architecture, code quality, and team mentoring across client projects.

- Tech-led a from-scratch OutSystems recruitment management product for Bold, plus an offline-capable branch front-office banking solution for EuroBic (engagement via KPMG).
- Defined application architecture for scalability and performance; enforced OutSystems standards (Architecture Canvas, 4-Layer Canvas) across both engagements.
- Mentored developers, owned estimation and delivery planning, and partnered with UX/UI, QA, DevOps and client business teams.

Software Engineer · Service Studio team (R&D) · OutSystems

Nov 2016 — Mar 2018

Built features inside Service Studio — the IDE used by every OutSystems developer — owning developer experience for frontend app building.

- Built features inside Service Studio — the IDE used by every OutSystems developer.
- Owned the developer experience for frontend application building on the platform.

Knowledge Engineer · OutSystems

Sep 2014 — Oct 2016

User advocate inside R&D — steered platform design toward simplicity, consistency, and learnability; wrote and maintained product documentation.

- User advocate inside R&D — steered platform design toward simplicity, consistency, and learnability.
- Wrote and maintained product copy, how-tos, reference docs, and API documentation.
- Facilitated user tests to validate new feature UX before they shipped.
